

Valley Box Company provides you with the right tools to optimize your shipping process and increase your service capabilities, all while increasing efficiency and cutting costs.

# Case Study: Refurbished Boxes

## CHALLENGE

An Engine Manufacturer needed to know if their 10 year old reusable boxes could be repaired or would need to be replaced. The company wanted the most cost effective option.

## SOLUTION

Valley Box Pack Technicians evaluated each box and noted all the materials needed to do repairs. It turned out that the cost of the repairs were minor when compared to cost of replacing the box. The steel pieces were removed, cleaned of corrosion, and repainted. Wood was replaced in sections to restore structural integrity. Upgraded hardware was added in place of old technology. The interior was re-foamed & carpeted. Finally, new paint brought the box back to its original luster.

## BENEFITS

- More cost effective to repair than replace
- Short turn-around on repairs
- Fit well with the company's Green business practices

## TESTIMONIAL

“ Thank you for the quick turnaround on the refurbishing of our wood transport boxes!
